Bearings and coordinates shown hereon are based on the Texas Coordinate System, South Central Zone (NAD-27).

Tide elevation at time of survey seemed to be above normal at time of survey. No C.O.E. Tide Gage could be found in the area.

Proposed 6 inch pipeline from well number 3 to well number 1 will be buried a minimum of 3 feet below the lake bottom. No reefs or oysters were found.

PROPOSED WELL LOCATION
AND PIPELINE
STATE TRACT 30, WELLS NO. 3 & 4
SABINE LAKE
JEFFERSON COUNTY, TEXAS

February 3, 2006

RECOMMENDED G.L.O. CODES

DB - No dredging in water less than 4 feet deep as measured from mean low water.

OM - Avoid dredging, dredged material disposal, geophysical surveying, drilling, and pipeline and platform construction on the top or slopes of reefs, banks, hard bottoms, artificial reefs, historic reefs, serpulid reefs, or constructed reefs on this tract.

NOTES REGARDING SPILL CONTAINMENT

1. A minimum of 500 feet or 18 inch boom and 200 absorbant pads will be maintained on the site during drilling operations.
2. There will be at least one employee on board at all times during drilling who is trained in boom deployment and oil spill response.
3. Sufficient oil spill boom will be maintained across the keyway to contain all un-anticipated upsets. The boomed keyway will be checked on a daily basis and changed as needed.
4. All hydrocarbon operations, including diesel fuel, motor oil and lubricants will be conducted during daylight hours.
5. The fuel transfer hose will be inspected for potential leaks prior to each use.
6. In accordance with EPA NPDES General Permits TXG330000 and TXG290000 there will be no discharge of produced waters, drilling muds, drill cuttings, and any other fluids associated with the drilling process into the waters of the bay.

NOTES

On January 31, 2006 a survey of the proposed well site and pipeline was made by John T. Jakubik & Assoc., LLC. An area within a 500 foot radius was surveyed around the proposed well locations and no oysters or reefs were found. The centerline of the proposed pipeline and an area 500 feet on both sides were also surveyed and no oysters or reefs were found.

The proposed activity complies with Texas' approved Coastal Management Program and will be conducted in a manner consistent with such programs.

Approximately 1200 cubic yards of material will be moved during pipeline construction.

NOTE:

Survey was made by John T. Jakubik & Assoc., LLC. on January 31, 2006 and no shell reefs or oysters were found within the 500 foot work area.

C.O.E. Tide Gage read +2.5' MLT at time of soundings.

The orientation of platforms and pipelines in work area may change from above layout.
